Safety Information

Chemical and Physical Properties

Composition of resin	: Modified Polyurethane
Physical State	: Solid
Thermal Class	: (IEC 172): 155

Storage and Handling And Transport

Special transport precautions	: None
Special Storage precautions	: None
Personal protection measures	: None

Inflammability and Explosion Danger

Not inflammable without primer
With primer it is inflammable at temperatures over 400°C
It is immediately auto-extinguishing
It is not explosive

Toxicological Data

In the case of total destruction by fire (by persistent flame at 700°C) before auto-extinguishing, the product will exhale CO, CO₂, H₂O as steam and will leave carbon residue. HAZARDOUS FUMES or DUST may be generated when soldering, welding, burning, wire brushing, melting or processing enamelled wires. Excessive exposure to dust may cause irritation to the eyes, skin and/or respiratory systems. The wearing of appropriate protective eye, skin and breathing equipment may be required. Inhalation of fumes should be avoided. The soldering of polyurethane enamel can present an Isocyanate inhalation hazard. Levels of free Isocyanate above the control limit can be generated during the soldering operation. It is recognised that exposure to Isocyanates can lead to sensitisation and occupational Asthma. Fumes should be removed by efficient exhaust ventilation.

Exposure Limits

Exposure limit 0.02mg per cubic metre for an 8 hour time weighted average reference period. Short term exposure limit 0.07mg per cubic metre for a 10 minute period.

Ecological Data

Waste should normally be recycled due to the high value of the base metal.
It should be noted that enameled wires are lubricated with wax at < 75mg per square metre of wire surface.

Proposition 65 – California Safe Harbor Warning

The chemical toluene diisocyanate, is listed under Prop 65 and is designated 'NSRL', No Significant Risk Level of exposure.
